

# Polishing Solutions for Complex-shaped Metal Part

## Digital Dentistry

Weshining boasts a wealth of experience in dental polishing and provides a suite of efficient solutions tailored for the digital dentistry sector. Our solutions enable precision polishing of complex-shaped metal surfaces swiftly. We have refined our polishing techniques to concurrently achieve surface leveling, deburring, and a mirror finish, all in just half the time required by traditional methods. This will assist in enhancing your production efficiency.

### Removable Partial Dentures

Material: CoCr

Treatment: High brightness, flatness

### Advantages

- Lowest labor costs
- Simultaneously complete multiple polishing processes
- Polish multiple workpieces in the shortest time possible
- Unmatched glossiness
- Reduced roughness: Ra value can be decreased by 15 times to 0.02 $\mu$ m
- Simultaneous polishing of both internal and external surfaces
- No deformation, high conformity
- Free of environmentally harmful substances
- Complies with medical machinery safety standards
- Certified with CE, IDMS, ISO9001

### Applications

- Titanium alloys
- Cobalt-chromium
- Stainless steel
- Customization of products in other materials
